

# Reading Colors Your World:

## Stained Glass Sun Catcher

### Supplies:

- +Plastic lid
- +Glass gems
- +Clear Glue
- +Yarn or ribbon

1. Place your lid on a flat surface, flat side down, rim edge up.
2. Pour enough glue into the lid so that it coats the entire lid bottom.
3. Arrange the gems on the lid, sticking them onto the glue.
4. Pour remaining glue over gems (optional).
5. This is the hard part — **WAIT**. It will take 3-5 days to dry completely, depending on your design and how much glue is used. It may help to place the lid up high and out of the way so you're not tempted to take it out too soon!
6. Once the glue has dried completely, it should peel away from the plastic lid easily. **If it still feels tacky, allow the sun catcher to continue drying.** We know, we know—this is so much waiting!
7. Using a pencil, toothpick, or other pointed object (you may need to ask your grownup for help), poke a hole in the dried glue near the outside edge.
8. Thread the yarn/cord through the hole and tie the ends.
9. Hang your sun catcher in a window and enjoy!
10. We always LOVE to see your artwork! Take a photo of you and/or your projects and email them to [krider.odell@gmail.com](mailto:krider.odell@gmail.com) or upload them using our Google Form.

Love this project? You can use your lid over and over to make more sun catchers! Clear glue and glass gems can be found in most dollar and craft stores. **If you're finished with your lid, you can bring it back to Odell and we'll use it in future projects.** See you next week for more reading and ART!

*Keep Reading!*
